Hospital Database Management
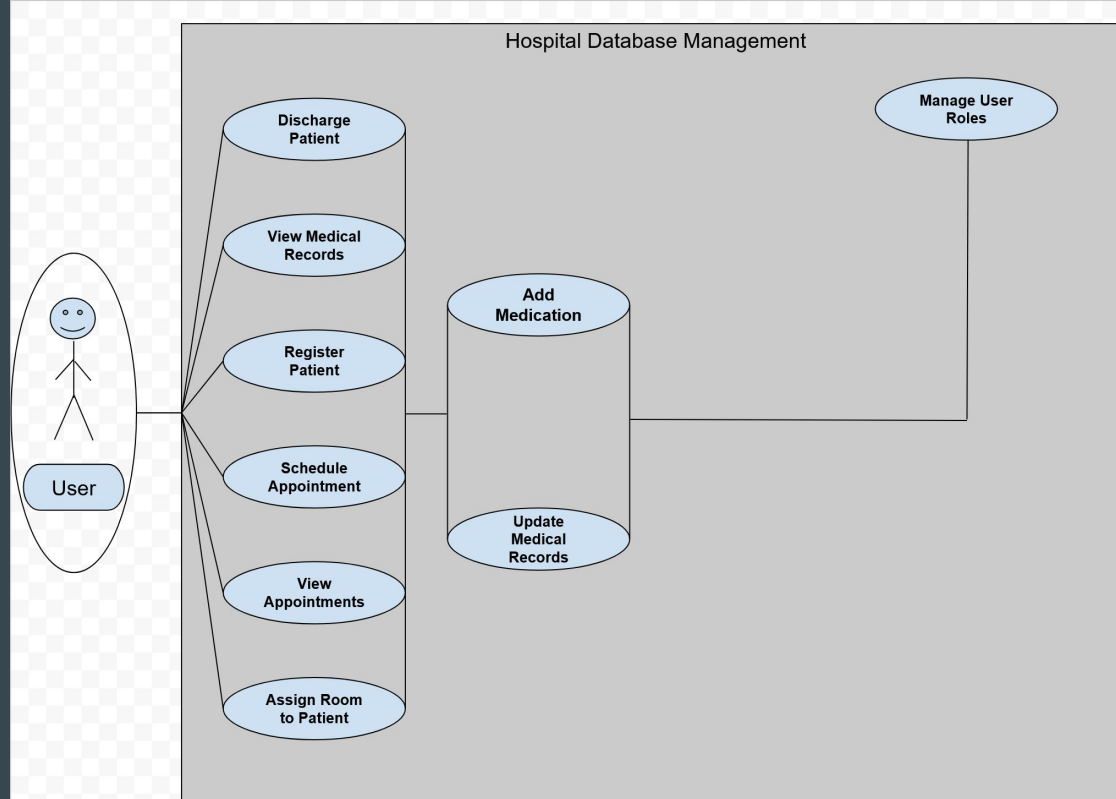

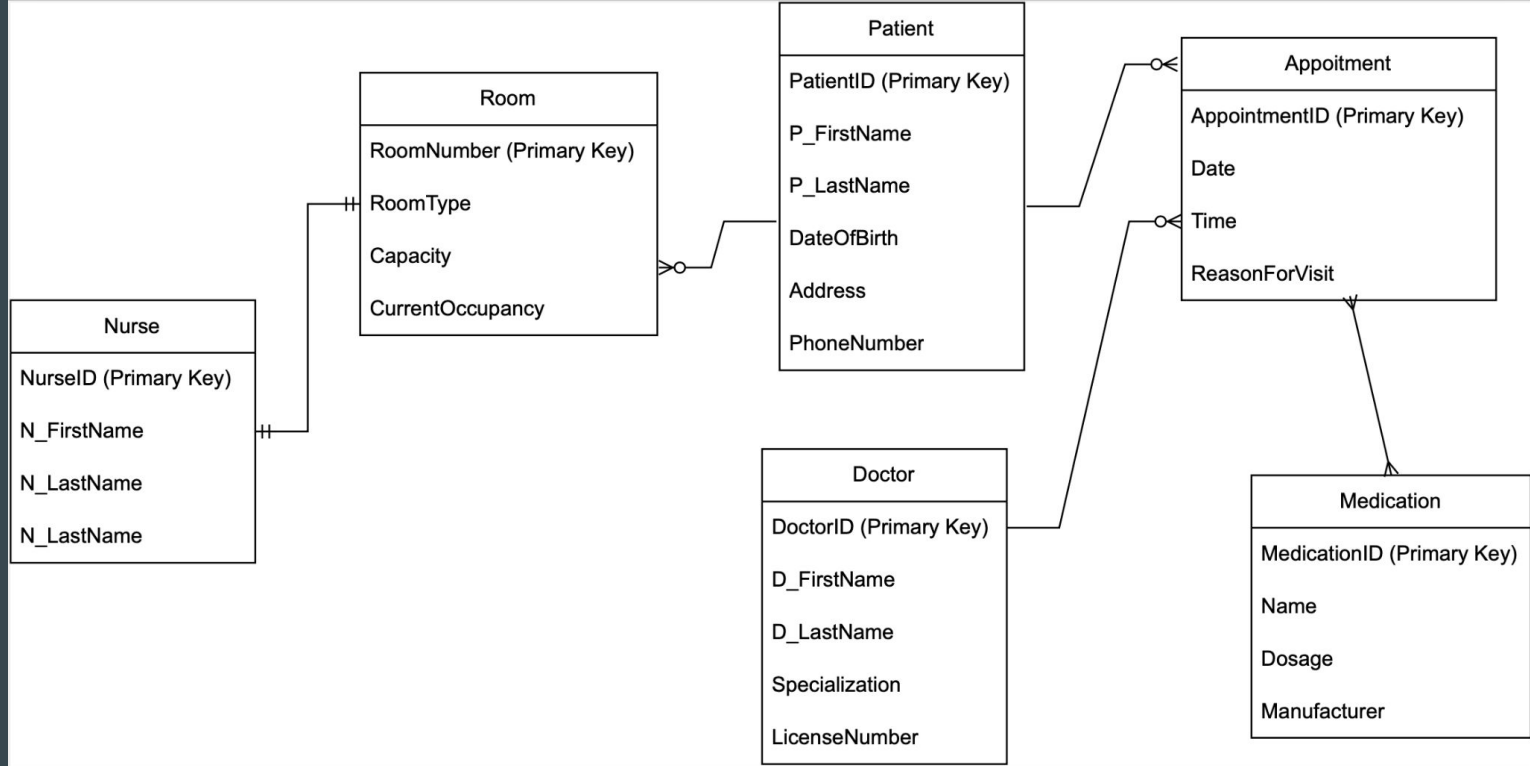

• • •

Alberto Gutierrez II
Jose Ruiz

System Description

- Our project is a simple hospital database management system.
- "Doctors" or "Nurses" can look up patient information or other relevant information needed such as medications or room numbers.
- The user has access to everything.
- The user will have a simple GUI where they can enter any information needed to enter.

E/R Diagram & Schema

Implementation Details

- We will be using a simple Python GUI using tkinter for this project
  - Full control
- Tkinter is the standard GUI tool used for python.
- We will also be working in sqlite
- We are thinking of adding a more complex UI but for now we are just sticking to Tkinter
